Important Product Change

Dear Customer;

Healthmark is very pleased to announce an update to our protein detection tests – ProCheck II and Endocheck-P Series. We have dramatically improved the color-change of the original design while keeping the sensitivity level (detection limit) at 1ug.

We are very excited about this product improvement and think you will find the test(s) much more user friendly. Please refer to the updated instructions for the specific details regarding the correct procedure.

Thank you for your support. Please feel free to share your feedback with us at <http://www.hmark.com/howdidwedo/>.

Regards,

Steven J. Basile
