1. Pull-Tight Locks are provided in 10-mat form. To separate locks, hold tab between thumb and forefinger and pull down.

2. Insert the tail of the Pull-Tight Lock through the locking dome on the side marked “Enter”.

3. Next pull the tail as tight as possible around the item being locked. Then gently tug on the looped portion of the tail away from the locking dome to insure that the locking barb is properly set into position.

CAUTION: Failure to follow these instructions may result in the tail pulling out.
